

# Playing with multiple toys

# Connecting multiple toys

You can connect more toys on the homepage or in the play section under "MANAGE TOYS".

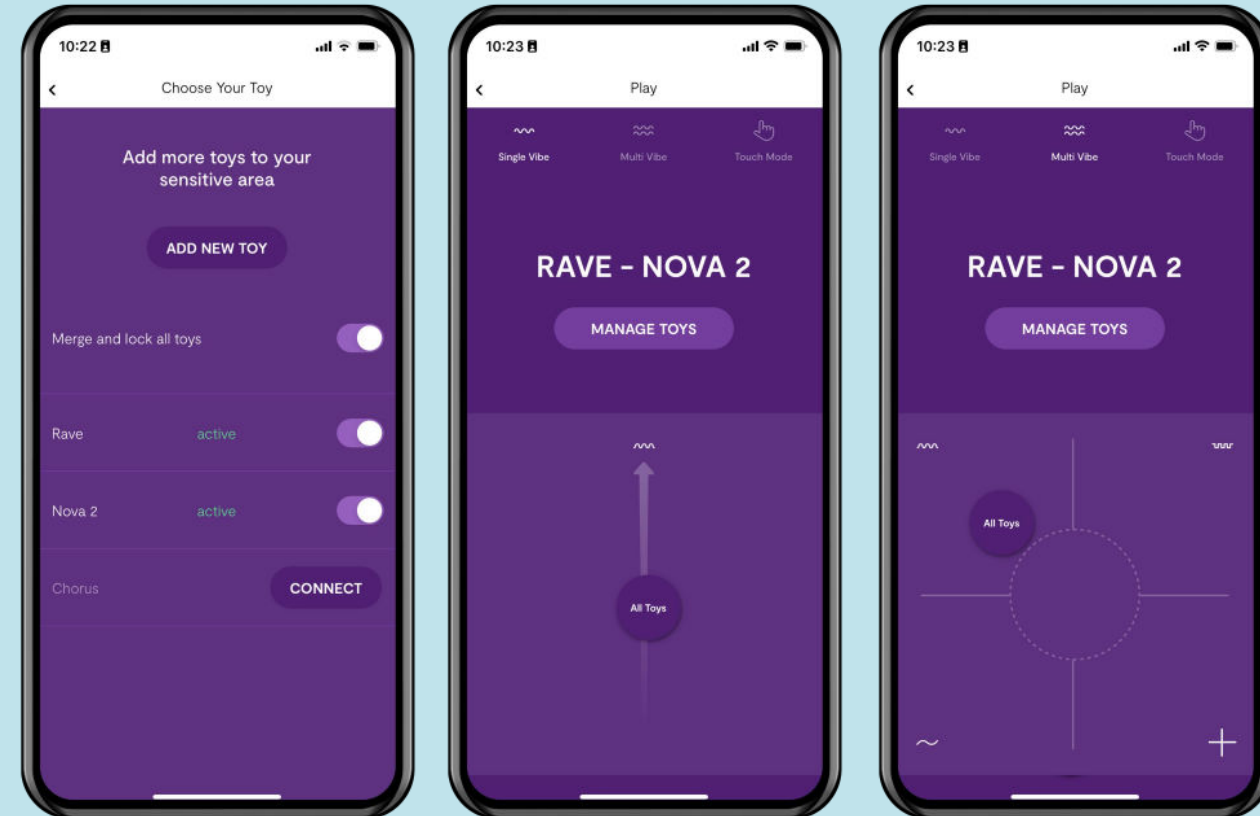

1. To add an additional toy, click "ADD NEW TOY" and follow the steps to connect your toy.
2. Toys already added to the app will already be shown.
3. The toy connected most recently will be "active".
4. Some older connected toys may need reconnecting, to do so, click "CONNECT" next to the toy you want to use.
5. Toggle the connected toys you want to use to control more than one.
6. Toys not toggled will be "inactive" and toys toggled will be "active". Make sure all toys you want to use are "active".

# Controlling toys together

Control all connected toys together so they all have the same intensity and vibe pattern.

1. To control toys together, toggle "Merge and lock all toys".
2. This will give you control of all connected toys on your app.
3. Go back to the play area and the Control Bubble will say "All Toys".
4. Once you move the control bubble, all your toys will react the same and have the same level of intensity and vibe patterns.

# Controlling toys separately

Control each toy individually – have each toy be at a different intensity level and/or vibe pattern (if desired).

1. To control each toy individually, toggle which ones you would like to play with then go back to the play section.
2. The toys you have connected will be stated at the top of the screen above "MANAGE TOYS".
3. It will only look like there is one Control Bubble at the bottom of the screen (single vibe) or in the middle of the screen (multi vibe).
4. To start controlling both toys, move the first Control Bubble to the side and then the next one will appear.
5. To control multiple motors of a toy, click the Control Bubble and two diamonds will appear.
